HIGH PURITY CARBON DIOXIDE IN BULK & CYLINDERS - "CARBICE" DRY & WET ICE

21st January 2015

David E. Skinner
Technical Sales Manager
Airborne Labs International, Inc.
22C World's Fair Drive
Somerset, NJ 08873

Dear Sir,

RE: TESTIMONIAL

Carbacid (CO₂) Limited is committed to supplying the highest purity of CO₂ to the food and beverage industry to our customers in the Eastern Africa region. To continuously monitor our CO₂ during the processing stages, and so as to ensure we consistently supply CO₂ in its purest form (+99.99%) it was decided to buy an analyzer system.

After obtaining specification and costs, and analyzing support services Carbacid went for a CDQC from Airborne Labs. We bought a system which comprises 2 racks, 1 filled with automatic analyzers and 1 unit for manual (Tubes) tests (Gas-5XLT), and the other has the services (stand for cylinder sampling and air Compressor). The system was installed by Airborne Labs technician (actually the Director of Analytical Systems & Products), who then performed a 3-4 day extensive training. Since then, the system has prevented the entering of contaminated (NO_x, SO_x and then Bz) CO₂ into our plant.

Even though Airborne Labs sits far away from us, we continue to receive assistance, especially in times of need, not only including direct recommendations from their President (Dr. Don Pachuta), but also including many free tests that they performed for us. The Analyzers we received are very robust and easy to calibrate and it is possible to perform a full parameter analysis according to ISBT and all our customers quality requirements in less than an hour, including the sampling of liquid CO₂. The system also monitors On-Line the vaporized CO₂ going into production. "If we were to buy again another system, we would not hesitate to buy the equipment from Airborne Labs."

Yours Sincerely,

For Carbacid (CO₂) Ltd

Aftab Jivanjee
Finance and Administration Manager
